

500kW Data Center Cabinet for Power Plant

ABB's modular, prewired, and pretested solutions provide for a fast and smooth startup with minimal site and civil works, thereby reducing risk and enabling speed to deployment. With a robust architecture, ...

Prefabricated Modules are designed and built to precise specifications in a controlled factory environment and utilize DCIM software which results in improved reliability and a more predictably ...

Our Power Distribution Units (PDU's) are designed for scalability and rapid deployment for modern data centers. Offering increased power density in a compact and ventilated structure, real time monitoring, ...

We provide the right cage, suite or server cabinet options to accommodate your equipment size, power and cooling requirements while providing layers of physical security to protect your deployment.

The space-saving PDU is easy to move and adapt to the future demands of the data center. The PDU offers superior power protection and monitoring, and the flexibility and scalability to match your actual ...

The Vertiv(TM) EnergyCore Li5 and Li7 battery systems deliver high-density, lithium-ion energy storage designed for modern data centers. Purpose-built for critical backup and AI compute loads, they ...

PFMIEA500C2N097A - Prefabricated IT Data Hall, 500kW, 97 Racks, Perimeter CW Cooling, Mod Distrib, 480V/60Hz.

500kW power output with modular design, supporting expansion up to 1.5MWh (customizable based on your product specs). Seamless integration with existing inverters for hybrid energy systems.

This is a 500KW small-scale commercial and industrial energy storage system. It can store electricity through photovoltaic, diesel generators, and other means, with off-grid design.

The Eaton line of three-phase power distribution units (PDUs) provide robust power distribution that can be easily tailored to meet the design specifications of any facility or data center. The PDU offers ...
