

Analysis of the current situation of solar power generation in Iran

Blackridge Research's Iran Solar Power Market Outlook report provides comprehensive market analysis on the historical development, the current state of solar PV installation scenario, its outlook ...

Iran has struggled with a persistent energy crisis in recent years. In early May, power blackouts returned across the country after a brief respite following winter shortages.

President Masoud Pezeshkian has emphasized the need to shift towards renewable energy to address Iran's power imbalance. In a recent high-level meeting on power shortages, he ...

Iran has set a new record in solar power generation, with output from its solar plants reaching 800 megawatts on August 26, according to the Renewable Energy and Energy Efficiency ...

This post explores the current state of Iran's new energy market, recent policies, key case studies in solar PV and energy storage, and the promising yet challenging road ahead.

This study investigates Iran's renewable energy options using a hybrid multi-criteria decision-making framework, motivated by the country's urgent need to diversify its heavily fossil-fuel ...

Characterized by excessive reliance on fossil fuels and frequent power outages, Iran has a lot of unrealized potential when it comes to renewable energy, especially solar and wind power, but ...

The current plans include adding 5,000 MW of solar power, 2,500 MW of wind power, 500 MW of biomass power, and 500 MW of hydropower over the next four years. Once these ...

By capitalizing on its substantial solar resources, Iran's energy problems have a workable answer in renewable energy, particularly solar electricity. Iran has a big edge here because many of ...

The government recently announced plans to partner with private investors to develop solar power plants, marking a pivotal shift towards renewable energy. This article explores the ...
