

Best orientation for solar photovoltaic panels

What is the best orientation for solar panels?

Getting the best orientation for solar panels ensures that they receive the maximum amount of direct sunlight throughout the year. In the UK, which sits in the Northern Hemisphere, this optimal setup is dictated by the sun's path across the sky.

Does solar panel orientation matter?

Whether you're installing a solar panel for home use or a commercial project, the direction and angle of your panels can significantly influence performance. In this guide, we'll break down everything you need to know to get the most energy from your setup. [Why Solar Panel Orientation Matters](#)

How do you calculate solar panel orientation?

The position of the sun in the sky can be plotted using two angles, azimuth and zenith and the angle of the solar panel orientation relies upon these two values. Azimuth - This is the compass angle of the sun as it moves through the sky from East to West over the course of the day. Generally, azimuth is calculated as an angle from true south.

Where should a solar panel be oriented?

Then we need to have the solar panel turned towards the terrestrial equator (either facing south in the northern hemisphere, or north in the southern hemisphere) so that during the day its orientation allows the panel to catch the greatest possible amount of solar radiation possible.

[Wrapping Up](#) Choosing between landscape and portrait orientation for solar panels depends on numerous factors, including roof structure, mounting system compatibility, environmental conditions, ...

Solar Panel orientation, direction, angle and placement explained. What is the best orientation for solar panels?

Learn the best orientation for solar panels (South) and effective alternatives like East-West facing roof orientation for solar panels.

? Why Direction Matters: Solar photovoltaic cells can only capture 33% of available sunlight energy due to bandgap limitations. Optimal orientation ensures panels receive direct sunlight ...
