

Canberra Energy Storage Project

The project will deliver an ecosystem of batteries across the ACT to ensure its electricity grid remains stable, and will help to future-proof the state's electricity security.

Australia's capital is stepping into the renewable energy spotlight with its ambitious Canberra energy storage reservoir project.

The way has been cleared for construction to begin on a 250 MW / 500 MWh battery energy storage system that will help "future proof" the Australian Capital Territory's energy supply by ...

Over the next year, three new community-scale battery energy storage systems (BESS) will be deployed across Canberra to optimize solar energy usage, stabilize grid demand, and ...

The project will support 150 local jobs in the emerging clean energy sector. Battery storage technology is a key component of the ACT's net-zero emissions future.

The ACT Government has reached a major milestone in its work to future-proof Canberra's energy supply. The development application has been approved to deliver Stream 1 of ...

The large-scale battery storage system will deliver 250 megawatts (MW) of power, store renewable energy and support grid reliability. Enough energy to power one-third of Canberra for two ...

Canberra is taking bold steps towards a sustainable future, with recent initiatives set to transform how we generate, store, and use energy. Here's what you, as a Canberra resident, need to ...

It is expected to be operational in 2026 and will be able to store enough renewable energy to power one-third of Canberra for two hours during peak demand periods.
