

On Monday, eight ministries - led by the industry regulator (MIIT) and macro planner (NDRC) - issued an action plan to promote the manufacturing of new-type energy storage (NES).

Unlocking its secrets could thus enable advances in efficient energy production, electronics cooling, water desalination, medical diagnostics, and more. "Boiling is important for ...

MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed for crude oil ...

The MIT-GE Vernova Climate and Energy Alliance, a five-year collaboration between MIT and GE Vernova, aims to accelerate the energy transition and scale new innovations.

New research emphasizes the importance of well-validated models and forecasting tools in evaluating choices for investments in clean energy technologies and policies by governments and ...

Energy Storage + Industry: Steel, cement, chemicals, petroleum, aluminum, coal, oilfields, and more - discover how energy-intensive enterprises reduce costs and improve efficiency ...

Beijing unveils a hybrid energy storage station beyond hydrogen, banking 580 million kWh and reshaping the future of renewable grid stability.

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing circuit, which ...

As the global energy storage industry gains unprecedented momentum, Beijing has emerged as a pivotal arena for dialogue and innovation in clean energy.

Energy After the mandate: China's energy storage sector one year on With clean energy projects no longer needing to be bundled with energy storage, companies are finding new ...

Beijing's energy storage power stations are revolutionizing how the city manages its growing power demands while reducing carbon emissions. This article explores operational projects, cutting-edge ...

At the MIT Energy Initiative's Annual Research Conference, industry leaders agreed collaboration is key to advancing critical technologies amidst a changing energy landscape.

China plans to have its battery storage capacity more than double to 180 gigawatts (GW) by 2027 in a new

Energy storage industry beijing

plan aimed at attracting \$35.1 billion (250 billion Chinese yuan), the authorities said ...

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

Liquid air energy storage could be the lowest-cost solution for ensuring a reliable power supply on a future grid dominated by carbon-free yet intermittent energy sources, according to a new ...

A look at how AI can be used to help support the clean energy transition by helping to manage power grid operations, plan infrastructure investments, guide the development of novel ...
