

Fenglun wind turbine

This turbine has extensive application prospects. It is tailored for medium to high wind speed offshore regions with wind speeds above 8 m/s. The unit has low construction and ...

East China's Fujian Province is now home to the world's largest 26-megawatt offshore wind turbine. Its hub center is 185 meters high, equivalent to a 63-story building. With an average ...

A 26 MW offshore wind turbine has been rolled off the production line by China's Dongfang Electric Corporation (DEC) in Fuzhou, Fujian Province. The company said the offshore ...

The HH140 Concrete Wind Turbine epitomizes strength and efficiency in renewable energy. Its concrete structure ensures longevity, while advanced technology maximizes wind capture, promising ...

Dongfang Electric has launched a new 26MW offshore wind turbine, the largest globally, designed for high wind speeds and typhoon resistance.

In a stunning display of technological prowess, China has completed the construction of the world's largest wind turbine, a 607-foot titan capable of producing 26 megawatts of power, further ...

The world's largest wind turbine--currently being tested off the coast of China--has blades that are more than twice as long as a Boeing 777's wingspan.

The turbine is a testament to China's rapid progress in offshore wind technology, representing the most powerful wind turbine globally.

The wind farm will feature grounded jacket foundations and at least 46 turbines, situated 50.3 kilometers offshore in the South China Sea. The project is estimated to cost around 1.35 billion USD.
