

# How to make wind turbine wind tube

Like the giant bubble fan from Willy Wonka's factory, this easy to make wind tube is great for exploring what flies, spins, tumbles, soars and falls, all easily mobile for the teacher/parent/adult/kiddo on the go.

A wind turbine is a simple mechanical device similar to the windmill. The blades of your turbine will catch air currents, using that motion to transmit mechanical energy along a drive shaft.

We built a wind tube, or vertical wind tunnel, to test how certain objects can float. We tested a bunch of fun materials, and found that terminal velocity determines how it will float.

Through this DIY project, you can explore different turbine designs, test various factors that affect performance, and better understand how wind turbines are used in real-world applications.

These instructions will show you how to build this PVC turbine, how to make blades for your wind turbine, how to use a multimeter to record electrical data and some basic wind energy science.

Find out how a wind turbine can use the power of the wind to generate energy in this science fair engineering project. You'll design various blades to find out which produces the most energy, and put ...

DIY step-by-step guide to designing, building and installing your own wind turbine for clean, affordable home energy.

In this guide, we'll walk you through everything you need to know -- from what tools and materials to use, to how to design, build, and install your very own DIY wind turbine.

This video shows how to build your own wind turbine using household materials and how you can use it for a science project.

DIY wind turbines can provide renewable electricity for off-grid homes, cabins, and homesteads, especially in consistently windy areas. Building your own turbine can be far more ...

Overview  
Planning Your Wind Turbine  
Assembling the Spindle and Spokes of a Vertical Axis Wind Turbine  
Mounting the Magnets of a Vertical Axis Wind Turbine  
Finishing Your Turbine Assembly  
Installing Turbine Electrical Components  
to your spindle plate, but many wind turbine kits come with this part already welded. If you are constru...  
By putting together your spindle first, you can construct your turbine piece by piece by adding parts one at a time to it. This will likely be the most efficient way to put together your turbine if you are attempting this project on your own.  
Slide your hub into place on your spindle.  
To prevent a buildup of friction and deterioration of your spindle/hub, you should place a bearing between the two parts. Fit your

# How to make wind turbine wind tube

bearing over the tapered end of your spindle sticking up from the spindle plate and slide it toward the plate until it comes to a rest at the thicker portion of the spindle. Then slid...See more on wikihow envynature How to Build a DIY Wind Turbine: A Complete Step-by ...In this guide, we'll walk you through everything you need to know -- from what tools and materials to use, to how to design, build, and install your very own DIY wind ...
