What is the maximum conversion and storage efficiency of the Integrated Device?

The maximum conversion and storage efficiency of the integrated device was equal to the efficiency of the solar cells (8.8%), demonstrating the absence of losses due to energy transfer to the BAT.

What are the characteristics of Integrated Devices based on self-discharging process?

First of all, integrated devices are subjected to self-discharging process. The energy storage part, indeed, has an internal resistance that consumes part of the energy stored. Moreover, during the discharge, the photogenerated electrons may flow back to the cathode of the energy storage part and recombine with positive charges.

What are electrochemical energy storage technologies?

Aside from that, modern society is now successfully consolidating electrochemical energy storage technologies, especially secondary (rechargeable) batteries (BATs),,,, and supercapacitors (SCs, also known as electrochemical capacitors or ultracapacitors),,,, .
