

Italian grid-side energy storage power station

The results of Italy's main grid capacity market auction for 2025, published by Terna, show that energy storage represented 51.1% of the 174 MW of new capacity assigned.

In the first three months of 2025, five new battery storage plants went into operation, bringing the installed capacity of our battery energy storage systems (BESS) in Italy to 1 GW.

This article explores how energy storage systems on the generation side are reshaping Italy's electricity infrastructure, with actionable insights for energy providers and policymakers.

The Italian government is aiming for 15GW of BESS capacity by 2030 to maintain security of supply. The Italian government, regulator, and Transmission Service Operator (TSO) are creating ...

“It is reasonable to expect that, when fully operational, all new renewable energy plants will already be installed with integrated storage systems. And where the market does not cover the...

As the penetration of solar power increases, grid stability has become a critical issue. In response, Italy is prioritizing the development of grid-scale battery energy storage systems (BESS ...

In this work, we analyse the system-level impact of deploying LES in Italy, focusing on social welfare and carbon abatement. The results show that the costs of LES need to decrease to justify their ...

The Italian government has authorized eight BESS projects that will strengthen the stability of the power grid. Companies such as Edison Next and GreenGo stand out in this initiative.

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the national grid ...

But here's the kicker - Italy's power grid energy storage power stations are the real MVPs, ensuring your gelato stays frozen during heatwaves. With 1.74GW of new storage added in 2024 ...
