

Liujing Photovoltaic Panels

Zhejiang Liujing Rectifier Co., Ltd. is a leading manufacturer of high-quality power semiconductor devices, well-regarded for our diverse product range and excellent service.

Zhejiang Liujing Rectifier Co., Ltd., is a specialized manufacturer in developing, producing and selling power semiconductor devices.

Imagine photovoltaic panels that work like sunbathing lizards - efficiently converting sunlight while staying cool. That's essentially what Liujing Photovoltaic Panels achieve through their innovative design.

This invention reflects our R& D team's continuous efforts in improving safety protection, structural design, and operational reliability for photovoltaic power systems.

The LIUJING MDA200A Photovoltaic Diode Module is designed for high-performance efficiency in solar energy applications, providing a robust and reliable solution with a maximum voltage rating of 1600V ...

The MD55A supports crossbreed energy systems integrating solar panels and generators. It manages energy circulation in between sources, focusing on solar energy to minimize gas consumption. ...

High-Power Voltage Regulation: The Liujing PV Rectifier Solar Diode Module MD55A is designed to handle 1600V high-voltage applications, enabling precise power control in solar energy systems, ...

At Liujing Rectifier, innovation is our driving force. This patent solidifies our leadership in advanced cooling solutions and energizes our mission to contribute powerful, reliable technology to ...

Zhejiang Liujing Rectifier Co., Ltd. has recently been honored with the "Honor Award" at the 2024 National Photovoltaic Energy Exhibition (SNEC). This award recognizes their innovation ...
