How is solar energy stored?

Solar energy can be stored primarily in two ways: thermal storage and battery storage. Thermal storage involves capturing and storing the sun's heat, while battery storage involves storing power generated by solar panels in batteries for later use. These methods enable the use of solar energy even when the sun is not shining.

Is battery storage a good way to store solar energy?

Thankfully, battery storage can now offer homeowners a cost-effective and efficient way to store solar energy. Lithium-ion batteries are the go-to for home solar energy storage. They're relatively cheap (and getting cheaper), low profile, and suited for a range of needs.
