

Nepal BESS Uninterruptible Power Supply

Are backup energy systems a necessity?

That's why backup energy systems are no longer a luxury--they're a necessity. Two of the most talked-about systems in this space are UPS (Uninterruptible Power Supply) and BESS (Battery Energy Storage System). While they might seem similar at first glance, they serve very different purposes and are built for different challenges.

Should you buy a ups or a Bess system?

UPS systems are cheaper upfront. But their batteries wear out faster and aren't designed for daily use. BESS systems are more expensive initially, but they offer long-term savings through energy arbitrage, grid incentives, and durability (especially with lithium iron phosphate batteries). Which One Should You Choose?

What is the difference between Bess and ups?

They use UPS for surge protection and instant switchovers and BESS to run for 8+hours during blackouts, powered by solar. The company uses BESS to flatten peak loads and reduce utility bills by 25%, while UPS protects conveyor belts from sudden shutdowns. UPS and BESS both play critical roles, but in different ways.
