

In 1995 the law in Portugal was changed to permit wind energy to access the electricity grid. A 1999 change to the feed in tariff encouraged development, the tariff has been changed several times since ...

A new version of the NECP 2030 was released, with wind power continuing to play an important role in decarbon-ization of the power system, setting targets of 10.4 GW for onshore wind and 2.0 GW for ...

In the context of the R3EA project, funded by the Portuguese Foundation for Science and Technology (FCT), we analyse a set of selected future power system scena

Wind energy produced last Sunday represented 86% of national consumption. This year, the accumulated production of this renewable energy represents 27% of national consumption, while ...

This study examines Portugal's electricity market outcomes in terms of prices, generation mix, and emissions for different wind and solar capacities, using the National Energy and Climate ...

Wind energy was the biggest source of renewable energy generation in Portugal in 2023, ahead of hydropower. It covered 29% of Portugal's electricity demand. Portugal wants to generate ...

Portugal is entering the next stage of its energy transition. Wind power and interconnection made it possible for Portugal to phase out coal in 2021; solar is now pushing gas off ...

Portugal risks becoming even more dependent on electricity imports if more wind and solar capacity are not installed. Electrification and grid modernisation are essential to guarantee a ...

Between 2015 and 2025, installed renewable capacity increased by 8,560 MW, a 69.6% rise. In January 2025, installed capacity grew by 66 MW, driven primarily by the expansion of solar power, with 57 ...

Portugal porto solar wind power generation system
