

Regulations on the scrapping of solar photovoltaic power generation

As the solar industry matures, more states are implementing specific policies to ensure proper end-of-life management of solar installations. As of 2023, 31 states have enacted some form ...

When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Find information here about ...

As of 2025, laws and regulations governing solar panel decommissioning are rapidly evolving, primarily at the state level, as the U.S. does not have specific federal policies directly ...

This analysis explores current disposal regulations, compliance strategies, and emerging trends in solar panel end-of-life management, providing stakeholders with crucial insights for ...

Our research found that as of April 2021, one federal agency, the Bureau of Land Management (BLM), and 15 U.S. states have solar decommissioning policies in place.

China has promulgated policies and regulations for managing PV EOL waste, including the National Solid Waste Law and GB or GB/T standards.

How does EPA regulate solar panel manufacturing scrap (e.g., off-specification solar panels) under RCRA? If a recycler only recycles the aluminum frame of a solar panel, would EPA ...

When solar projects reach the end of their expected performance period, there are several management options. They include extending the performance period through reuse, refurbishment, or repowering ...

End-of-life management for photovoltaics (PV) refers to the processes that occur when solar panels and other components of a PV system (racking, inverters, etc.) are retired from operation.

With the continued growth of the U.S. solar market, it's no surprise that legislators are seeking to ensure that these facilities are properly decommissioned at the end of their usefulness.
