

Solar Power Remote Control Boat

During a few weeks, the first SunChallenger prototype was built and launched with simple and inexpensive boat parts. A lot of the time was spent programming and calibrating the internet ...

[Thingify] took this idea to the extreme with a remote-controlled boat that connects to a satellite internet service and adds solar panels for theoretically unlimited range, in more ways...

The best part about this boat is that I can just push it out into the lake, go park my trailer, and then RC it back to the dock. Everybody on the shore thinks that some crazy old man just lost his ...

Have you ever been to the lake to watch the guys with the Chris Craft or Sail Boats? They're sitting around talking 90% of the time. Why aren't they running their bo...

Discover solar RC boats with powerful lithium batteries & CE-certified performance. Perfect for electric boat enthusiasts and outdoor fun.

Brave Puffin is a solar powered, long range, autonomous boat. Puffin is designed to compete in the annual Microtransat Challenge in the non sailing, fully autonomous class - that is, to ...

The main electronics are mounted in a waterproof box ...

Glide effortlessly across the water, benefiting from catamaran stability and a top speed of 6 knots, running all day at trolling speeds and extending your journey further with solar power.

These boats offer many benefits over traditional gas-powered boats, from cost savings to environmental protection. Here are some of the reasons why you should consider buying a solar electric boat.

I added solar panels to my custom-built R/C drone boat, to give it effectively unlimited range. With a Starlink Mini, it already had unlimited video and control range, but with solar panels...

The main electronics are mounted in a waterproof box underneath the deck/solar panel, including an Arduino Pro Mini, RC receiver, and a microSD card reader. GPS coordinates are stored on the SD ...
