

The Dutch solar energy market is at a turning point. The Senate's decision to abolish the net metering scheme by 2027 has caused a chain reaction that radically changes the sector. As a ...

To achieve that goal, it is important to take a sustainable approach to recycling solar panels, as the number of solar panels in the Netherlands is increasing. By 2030, many solar panels ...

We provide environmentally friendly disposal and processing of solar panels, allowing companies to not only comply with legal requirements, but also contribute to sustainability and environmental ...

A discarded solar panel often turns out to be very suitable for reuse, because it still has a capacity of more than 90%, for example. Refurn is the only recycler in the Netherlands to be Cenelec certified for ...

Stichting OPEN has been made responsible for arranging collection, processing and discarding or recycling of End-of-Life (EoL) solar panels in a proper way.

The Netherlands is expected to replace nearly half a million solar panels within the next five years, but the process of recycling these panels remains in its early stages, according to recent ...

Starting from a disadvantaged position, the Netherlands has risen to become a leader in solar energy in Europe. On average, there are more than three solar panels per person installed on ...

The Foundation Solar Energy Recycling Netherlands wants to ensure the proper, environmentally-friendly processing of solar panels and inverters at the end of their lifespan for its ...

We expect considerable progress to be made here in the coming years. This is already being done on a small scale in Japan and Europe, for example, where 96% of silicon solar panels are recycled."

Solar panels dismantled in the Netherlands
