

# Solar power generation electricity selling price

How much does solar power cost?

The weighted average wholesale price for solar PV-generated electricity was \$83 per megawatt-hour (MWh) in 2019, more than double the price paid to producers for electricity generated by wind, fossil fuels, or nuclear. The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing.

Why are solar PV prices so high?

The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing. Wholesale electricity prices are the prices that electricity retailers, such as utilities, pay electricity producers, such as power plant owners and operators.

How do wind and solar power plants affect electricity market prices?

Wind and solar plants have near-zero marginal costs since they are weather-driven without inherent energy storage. Due to this property, these plants will be dispatched first, and they push more expensive power plants out of the market. Consequently, electricity market prices fall. system, as illustrated in Figure 2. If the supply curve is

How is solar price measured?

The solar price for utility-scale projects is measured using LCOE, which typically has the lowest LCOE among all solar PV sectors. As solar prices continue to decline, utility solar PV plays a key role in the global energy transition, supporting large-scale renewable energy adoption.
