

Sweet potatoes stolen from under photovoltaic panels

By implementing these strategies, photovoltaic farms can enhance their security with proactive tools, effectively protecting valuable assets while combating solar theft and the illicit trade ...

In this article, we'll discuss the history and projected growth of the solar industry, specific incidents of solar panel theft, why solar panels make such an attractive target to thieves, and what ...

Therefore, this study aims to investigate the impact of SCAPV and EAPV on evapotranspiration (ET) and sweet potato quality and yield. We conducted three treatments: SCAPV, ...

This study aims to investigate the growth of potato plants both beneath and between simulated solar panels, as well as in a control area. The effects of two levels of deficit irrigation (35% ...

Low-cost solar energy is now growing so fast as to be a "gold rush" in Alberta. In fact, much to Ontario's shame, Alberta has taken on the leadership role in solar development in Canada, ...

Unfortunately, what should be a virtuous initiative is giving rise to a new crime wave, with police data showing a staggering 48% rise in solar panel and cabling theft from 2021 to 2022.

After harvesting sweet potatoes in each field, some of the product gets left behind on the ground. Individuals will then disregard "No Trespassing" signs and grab these leftovers, oftentimes...

Agrovoltaics, the integration of solar panel systems with agricultural practices, presents a promising approach to addressing the increasing challenges posed by climate change. This ...

In order to investigate the effects of establishment of photovoltaic (PV) panels on field illumination conditions and sweet potato growth in an agro-photovoltaic integrating system, we used ...

Solar panel theft is on the rise - discover why it's happening, the real cost to operators, and how security measures can help protect valuable infrastructure.

Sweet potatoes stolen from under photovoltaic panels
