

# US solar energy storage in 2025

According to the Q4 2025 US Energy Storage Monitor from Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP), 2025 energy storage installations ...

Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW installed. Combined, solar and storage accounted for 82% ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like California and Puerto Rico, and continued ITC access through ...

Solar power and battery storage are expected to lead new U.S. generating capacity additions in 2025, according to the Energy Information Organization (EIA). The EIA expects 63 ...

"In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year," the Energy Information Administration said. "We expect...

Of the 11.7 GW of clean power capacity added in Q3 2025, utility-scale solar and battery energy storage accounted for 91% of the total, said a report from the American Clean Power ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Energy storage was another fount of progress in 2025, with installations for the year projected to be more than 50% higher than in 2024, led by Texas, California, and Arizona.

Solar and storage dominate U.S. power growth in 2025, cutting costs, boosting jobs, and securing America's clean energy future.
