

Renewable energy sources (RES) continue to supply 8.7% of Ukraine's energy, down from 9.4% in 2021. However, this decline is largely due to the occupation of territory rather than the ...

Research identifies priority regions for solar and wind energy development, offering a strategic blueprint for the country's post-war energy recovery.

Renewable energy use in Ukraine started from a relatively low base in 2016, but until the 2022 invasion its use was growing in all sectors. Overall in 2017 Ukraine 6.67% of total energy consumption in the country was provided by renewable energy sources. This broke down into 7.56% in the heating and cooling sector, 8.64% in the electricity sector and 2.44% in the transport sector. Renewable energy use grew particularly strongly in the electricity sector from 2018 to 2021 with a large rise in solar power inst...

Given Ukraine's high average wind speed, significant solar energy potential, and increasing volume of agricultural waste, the country's renewable energy sector has substantial growth potential. Before the ...

In 2025, Ukraine continues the development of renewable energy as the foundation of energy security. Key priorities include decentralisation, storage technologies, and attracting investment. Solar, wind, ...

In partnership with USAID, the U.S. Department of Energy's National Renewable Energy Laboratory (NREL) is supporting deployment of renewable-generation-based microgrids that will enable Ukraine ...

Ukraine possesses immense renewable energy potential, particularly in wind and solar power. The country's post-war reconstruction plan includes an ambitious target of achieving 27.1% ...

The Kremlin's forces have been striking Ukraine's energy generation and distribution facilities almost daily. Attacks on November 25 alone left more than 40,000 people without power in ...

In a collaborative effort to promote the resilience and sustainability of the energy system as part of Ukraine's reconstruction, this project has harnessed the expertise of the leading DOE national ...

Ukraine's National Renewable Energy Action Plan, adopted in August 2024, sets renewable energy targets of 27% of electricity consumption and 25% of generation (2022: 14.3%), to be achieved by 2030.

Renewable energy use in Ukraine started from a relatively low base in 2016, but until the 2022 invasion its use was growing in all sectors. Overall in 2017 Ukraine 6.67% of total energy consumption in the ...
