Is photovoltaic waste recycling a 'manufacture-utilization-recycling-regeneration' strategy?

As many countries propose the "photovoltaic waste recycling act", more and more scholars are researching the "manufacture-utilization-recycling-regeneration" strategy for photovoltaic products (Lai et al., 2022).

What is the PVP dataset?

It is a public dataset for extracting high-quality photovoltaic panels in large-scale systems. The PVP Dataset contains 4640 pairs image of PV panel samples from 13 provinces in China.

Can recycling waste photovoltaic panels reduce reliance on primary resources?

Therefore, to limit resource use and environmental impact, developing technologies for recycling waste photovoltaic panels can reduce reliance on primary resources and increase resource sustainability (Mathur et al., 2020).

Will Korea implement a PV panel waste producer responsibility system in 2023?

In 2019, the Korean Ministry of Environment adopted the "Act on Resource Circulation of Electrical and Electronic Equipment and Vehicles", emphasizing the implementation of the PV panel waste producer responsibility system from 2023 onwards (Kim and Park, 2018).
