

Yun Photovoltaic A plus board

In this first, overdue, Arduino Yun board assessment we described it only superficially. Yun lends itself as a testbed, simple and inexpensive sandboxed platform that is ready for you to experiment at the ...

Arduino Y#250;n is the first member of a new groundbreaking line of wifi products combining the power Linux with ease of use of Arduino. Y#250;n means "cloud" in Chinese language as the ...

Perfect for connecting devices using Wi-Fi, Ethernet and Power over Ethernet options, the Yun combines an ATmega32u4 microcontroller with a Linux based Linino WiFi System on Chip module.

This innovative procedure is aided by Arduino Yun microcontroller board and PV powered water pumping motor for providing irrigation system for peasant in hydroponics in the rural communities in ...

Arduino Y#250;n is the first member of a new groundbreaking line of wifi products combining the power Linux with ease of use of Arduino. Y#250;n means "cloud" in Chinese language as the purpose of this board is ...

Arduino Y#218;N is the perfect board to use when designing connected devices and, more in general, Internet of Things projects. It combines the power of Linux with the ease of use of Arduino. ...

There is no on-board voltage regulator for higher voltages, which will damage the board. The Y#250;n is also compatible with PoE power supply but in order to use this feature you need to mount a PoE module ...

Learn how to use the Arduino Yun with detailed documentation, including pinouts, usage guides, and example projects. Perfect for students, hobbyists, and developers integrating the Arduino Yun into ...
